

WEBSense HOSTED WEB SECURITY

Today's Internet threats are more invasive and abundant than ever before, and the nature of these attacks is constantly changing. Businesses that deploy only on-premise technology increase their administrative burden, network operating and capacity planning costs, and are completely reliant on in-house expertise to ensure best security practices. Websense® Hosted Web Security provides protection at the Internet level, eliminating threats before they reach your network and providing unique centralized security in distributed or mobile environments. Backed by industry-leading SLAs, Websense Hosted Web Security reduces business costs, eliminates complexity and uncertainty, and provides comprehensive protection.

Websense is the established global leader in Web security. Websense Hosted Web Security leverages the technology trusted by thousands of businesses worldwide to provide a hosted model for Web security—with no software, hardware, installation, or maintenance required on-site.

Websense Hosted Web Security centralizes Web protection across multiple gateways, locations, and roaming users. Sharing a common interface with Websense Hosted Email Security, Websense Hosted Web Security simplifies policy and administration, providing best-in-class protection and granular Web policy management and reporting.

Websense Hosted Web Security provides protection at the Internet level, eliminating threats before they reach your network

How It Works

Websense Hosted Web Security acts as a Web proxy hosted off your network. You can enable the proxy through a chained connection to your existing proxies, or by automatically directing users' browsers to the Websense service. Websense datacenters are load-balanced, redundant, highly available clusters located in eleven locations worldwide.

All Websense datacenters have been certified to ISO27001 standards to provide the highest degree of global and localized security, privacy, and confidentiality. Websense SLAs guarantee uptime and provide competitive spooling and disaster recovery provisions as standard elements of the service.

Websense Hosted Web Security is available in two modules:

Websense Hosted Web Filter

Hosted Web Filter provides comprehensive and accurate Internet filtering, including filtering for productivity and bandwidth-draining Web sites. Through granular and configurable policies, you can set enforcements to manage employee Internet access, all through a centralized, secure interface for all users in any location. Even in complex distributed environments or those with roaming users, managing Web usage policies is simple, scalable, and predictable, reducing business costs and network complexity.

Websense Hosted Web Protection

Websense Hosted Web Protection secures your networks against blended and Web-based threats such as viruses, Trojan horses, worms, spyware, and other forms of malware. Websense Hosted Web

Protection processes all Web content, including webmail, through the Websense service to remove malicious code before it reaches your network. Using a combination of commercial antivirus engines, Websense ThreatSeeker™ technology, and correlated heuristics, Websense provides the best Web protection available today. And, because the protection is hosted and centralized, securing your network environment and business assets is easier than ever.

Benefits

- Protects against Web-based threats including viruses, Trojan horses, worms and phishing attacks
- Prevents lost productivity through unauthorized or excessive employee Web usage
- Safeguards employees from illegal or inappropriate Web content
- Reduces the complexity of managing Web security in distributed or growing environments and for mobile users

- Protects webmail from malware threats
- Reduces the legal liability of having illegal content in your network
- Reduces costs by optimizing network bandwidth availability
- Eliminates the risk and uncertainty of managing a solution on-site
- Competitive SLAs guarantee the effectiveness of the service, provisioning for guaranteed uptime, protection from known viruses, and more
- Transparent to the end user with no noticeable latency
- Close integration with Websense Hosted Email Security solution for centralized Web and email security management

Summary

Websense provides preemptive protection to ensure your critical assets are protected from Internet threats. The combination of security expertise and ThreatSeeker technology detection capabilities reduces false positives and ensures your systems are protected. ThreatSeeker technology makes Websense the first to detect and the first to protect against many malicious threats.
